BrainsFirst

COGNITIVE TALENT PROFILE

Based on the Global Football Brain Index ©

Player Name: melina Dupont

Test date: 28-10-2026 16:14:10

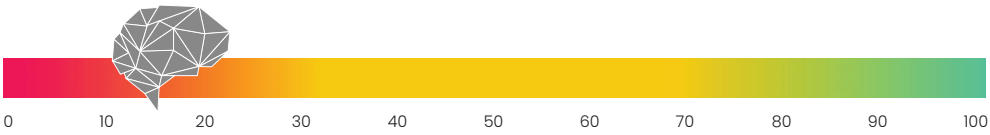

Talent ID: 569646

Overview Scores

Name: melina Dupont.

Age: 20 year

Top football brain-score

14

Cognitive scores: Football brain-factors

These scores show how the player scores on skills that are important in football, compared to peers who compete at a high level.

ESSENTIALS	Score	Quality of data	Game	Brain skill set
Responsiveness Attention speed	11		4	ATTENTION
Speed of action Speed of information processing	43		3	CONTROL
Overview Working Memory Capacity	21		1	WORKING MEMORY

EXTRAS	Score	Quality of data	Game	Brain skill set
Self-reflection Attention Guide	19		4	ATTENTION
Resiliency Stress resilience	29		2	ANTICIPATION
Detailed perception Working Memory Identity	19		1	WORKING MEMORY
Filtering Working Memory Filtering	92		1	WORKING MEMORY

BASICS	Score	Quality of data	Game	Brain skill set
Thinking one step ahead Anticipation performance	12		2	ANTICIPATION
Impulse control Motor inhibition	39		3	CONTROL

Speed **ATTENTION**

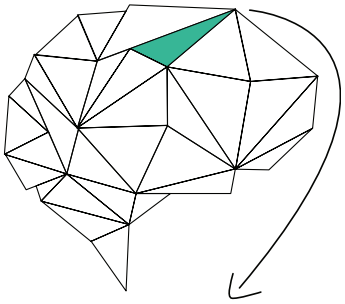

Responsiveness

Definition: The extent in which you make quick decisions in an environment with a lot of information.

Are you focused and alert and does that result in saving time on the field?

'Attention speed' is an important building block for behavioural characteristics in football like:

- Decisiveness
- Speed of action

Important brain region:
Premotor cortex

11

TIPS – when scoring lower

- In defense: keep distance, don't let someone get the best of you due to speed of action
- For offense: Take space where possible
- Force yourself to decide faster in situations with low risk.

TOPS – when scoring higher

- You can act quick in situations where a lot of information is presented
- You can make decisions quickly
- Overall you're focused and alert

Speed **CONTROL**

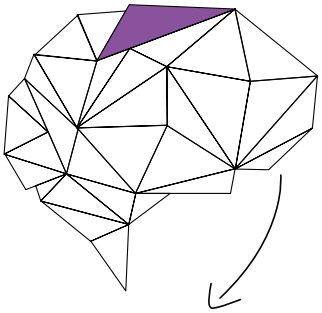

Speed of action

Definition: the extent of how fast you can manage simple or routine actions.

How fast do I switch from a decision (thinking) to action?

'Control speed' is an important building block for behavioural characteristics in football like:

- Decide and act quickly
- High game pace

Important brain region:
Motor cortex

43

TIPS – when scoring lower

- Focus on one thing at the time if speed of action is essential
- Keep the variation in your game solutions limited
- Train extra on standard situations

TOPS – when scoring higher

- You can act quickly on autopilot
- You can make simple decisions quickly

Capacity **WORKING MEMORY**

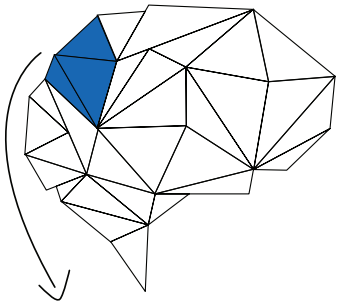

Overview

Definition: the amount of information you can memorize, retrieve, apply and combine during the game.

⚽ *What is happening around me at this moment? Where are the other players? Do I see the bigger picture?*

'Capacity' is an important building block for behavioural characteristics in football like:

- Creativity during the game
- Ability to solve problems
- "To see the bigger picture"

Important brain region:
Superior parietal cortex

21

TIPS – when scoring lower

- Keep the game simple
- You probably function better as a winger
- Play according to the agreed system within the team

TOPS – when scoring higher

- You can consider more game information at once
- You can see and make connections more easily
- You are probably good at recognizing patterns

Guide **ATTENTION**

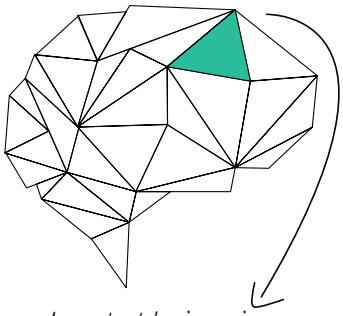

Self-reflection

Definition: the extent in which you can monitor your own behaviour and when necessarily correct it.

⚽ *Are you always conscious of your own behaviour, choices and actions?*

'Guide' is an important building block for behavioural characteristics in football like:

- Focus attention
- Divide attention

Important brain region:
Anterior cingulate cortex

19

TIPS – when scoring lower

- Regularly ask your colleagues for feedback on your performance
- Discus if someone can be a mentor for you during the game

TOPS – when scoring higher

- You are capable to estimate if your behaviour fits the circumstances
- You have yourself well under control and can adjust your actions

Stress resilience **ANTICIPATION**

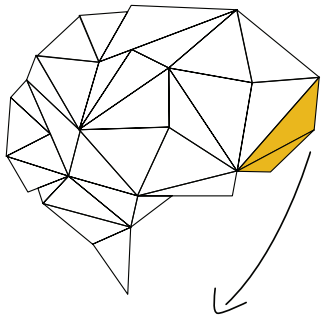

Resiliency

Definition: the extent to which you are able to keep performing under pressure

Do you keep performing when you're down in score, when you get a yellow card or in case of provocations?

'Stress resilience' is an important building block for behavioural characteristics in football like:

- Stress resistance
- Perseverance
- Doorzettingsvermogen

Important brain region:
Ventromedial prefrontal cortex

29

TIPS – when scoring lower

- Keep your game (and task/role) simple
- Pay (a lot of) attention to self-regulating techniques

TOPS – when scoring higher

- You can keep your cool in stressful situations
- Even with increasing complexity or time pressure, you continue to function well

---

Identity **WORKING MEMORY**

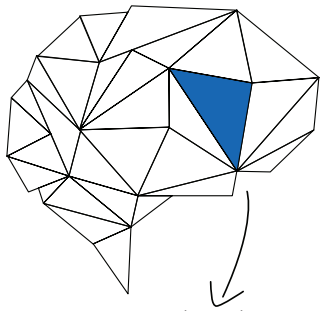

Detailed perception

Definition: The amount of detailed characteristics of information you can take in and process during the game.

What happens exactly at this moment and where does this happen precisely? Think of the distance towards the goal, the ball's speed and the direction of the opponent.

'Identity' is an important building block for behavioural characteristics in football like:

- Focus on details (effect of the ball, direction from the opponent)
- Ability to distinguish (e.g. 2 different opponents running speeds)
- Precision of estimating a game situation

Important brain region:
Dorsolateral prefrontal cortex

19

TIPS – when scoring lower

- Keep the game – the solution(s) to be chosen during the game - simple

TOPS – when scoring higher

- You have an above-average eye for detail: think of graphic representations or spatial situations
- You can make detailed, balanced choices that often improve your game solution

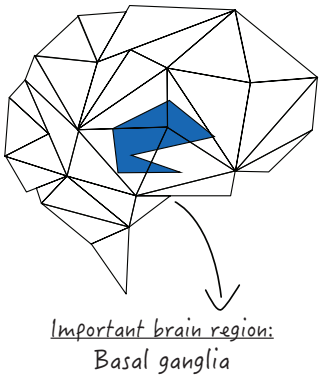

Filtering

Definition: The extent to which you are able to separate the important information from irrelevant information.

Do you keep track of the right player when other players attract your attention?

'Filtering' is an important building block for behavioural characteristics in football like:

- Keep track
- Focus your attention on what matters to you on the field

92

TIPS – when scoring lower

- Make clear agreements with your team mates and stick to it
- Don't be tempted to break out of your role, task or position

TOPS – when scoring higher

- This helps to keep playing efficiently and on a constant level
- You are relatively good in doing what you have to do in complex game situations

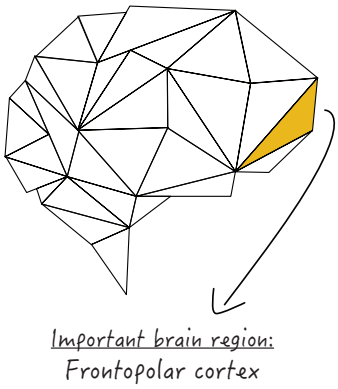

Thinking one step ahead

Definition: the extent to which you are able to determine the outcomes of your actions and act on that proactively.

What do I have to do now in order to create a beneficial game situation for my/our next move?

'Anticipation performance' is an important building block for behavioural characteristics in football like:

- Timing
- Thinking ahead
- Being one step ahead of your opponent

12

TIPS – when scoring lower

- Keep your game simple and clear
- Be open for coaching

TOPS – when scoring higher

- You are capable of thinking two steps ahead
- You can estimate how you can control different situations

Inhibition **CONTROL**

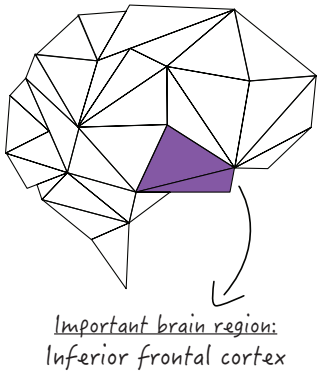

Impulse control

Definition: Acting accurately in complex situations.

How quickly & well do I respond to changes (e.g. direction and speed)

'Inhibition' is an important building block for behavioural characteristics in football like:

- Switching (offense --> defense and the other way around)
- Act in a controlled manner
- Self regulation

39

TIPS – when scoring lower

- In defense: keep distance
- For offense: stay out of duals, take your space

TOPS – when scoring higher

- You can protect yourself for making unnecessary mistakes
- You are capable to act differently or stop an action at the last moment

---

Automatism **CONTROL**

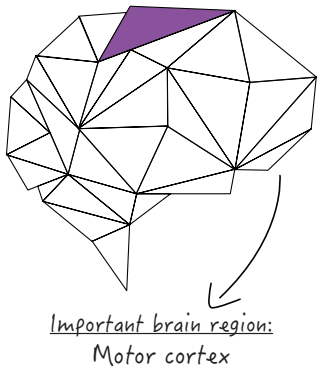

Autopilot

Definition: the precision in which you can perform repetitive actions.

How precise your performance is when you have to do actions repetitively?

'Automatism' is an important building block for behavioural characteristics in football like:

- To act flawless
- Accuracy/cleanness (e.g. in passing)

42

TIPS – when scoring lower

- Focus on one thing at a time to reduce mistakes
- Keep your game simple and clear
- Pay (a lot of) attention to concentration techniques

TOPS – when scoring higher

- As a rule, you make few mistakes in standard game situations
- You are able to deliver consistent game quality

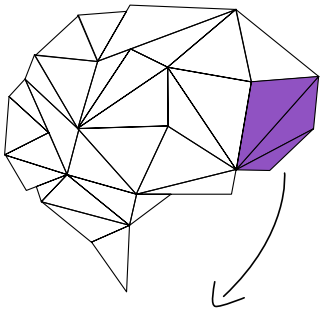

Flexibility

Definition: the ease in which you can switch between tasks.

For example: when you lose the ball do you stay in that moment or do you switch to the next action?

'Flexibility' is an important building block for behavioural characteristics in football like:

- Maneuverability
- Improvisation
- Switch between attack and defense and vice versa

Important brain region:
Ventrolateral prefrontal cortex

48

TIPS – when scoring lower

- Make sure to keep your role/task simple and limited during the game

TOPS – when scoring higher

- You're are able to switch easily (offense– defense)
- Your game quality remains stable when there is a frequent change in actions/game roal

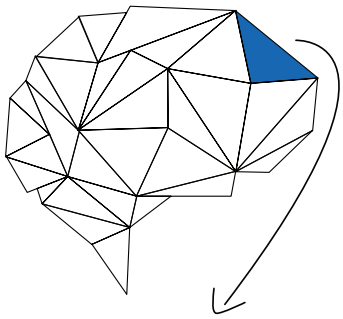

Composure

Definition: the extent to which you can block out external distractions during a football game.

Can you keep track of everything around you, even when an opponent starts talking to you?

'Distractibility' is an important building block for behavioural characteristics in football like:

- Shut out your surrounding
- Being difficult to distract

Important brain region:
Superior prefrontal cortex

32

TIPS – when scoring lower

- Learn concentration techniques
- Force not to react and keep your focus on the game

TOPS – when scoring higher

- You are capable of keep playing your game no matter what circumstances
- When you do get distracted, you are able to pick up your game right away

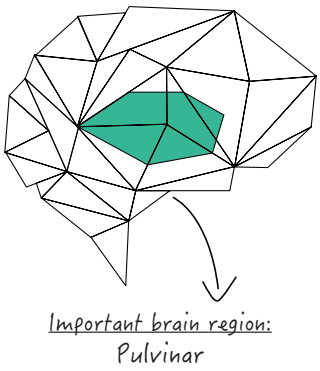

Disengage

Definition: the extent in which you can let go of actions of the past.

Do you mentally stay stuck in moments of happiness or sadness or do you move on right away?

'Disengage' is an important building block for behavioural characteristics in football like:

- Imperturbability
- Mental flexibility
- Effectiveness

61

TIPS – when scoring lower

- After a disappointment, switch your attention consciously to the next action
- The same counts for moments of cheering

TOPS – when scoring higher

- You can easily let go of a problem, event or provocation
- You are not easily put of by setbacks

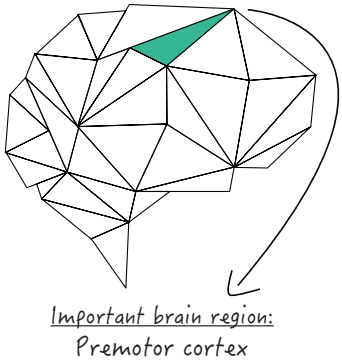

Sharpness

Definition: The extent in which you can act precisely in situations with a lot of information.

Do you keep your head in the game at all times?

'Attention performance' is an important building block for behavioural characteristics in football like:

- Precision
- Efficiency

84

TIPS – when scoring lower

- Make sure to focus completely on one task, keep it as simple as possible

TOPS – when scoring higher

- You are able to coordinate and execute many tasks at het same time
- You can act flawless when different tasks come your way

Concentration **ATTENTION**

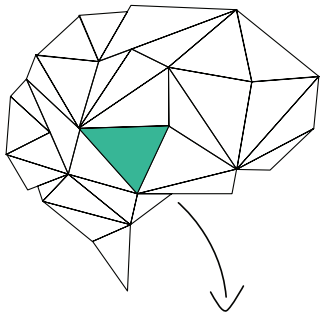

Focus

Definition: the extent in which you can keep you focus on the task at hand, even when it becomes repetitive or boring.

Are you sharp and alert and can you gain / maintain time gains?

'Concentration' is an important building block for behavioural characteristics in football like:

- Focus
- Perseverance
- Constant performance

Important brain region:
Superior temporal gyrus

14

TIPS – when scoring lower

- Make tasks simple and clear
- Don't take on too much

TOPS – when scoring higher

- When it comes down to it, you can keep doing what you must do
- You are able to maintain a constant level of performance for a long period of time
- When your mind starts to wander, you are able to make yourself focussed again

---

Move **ATTENTION**

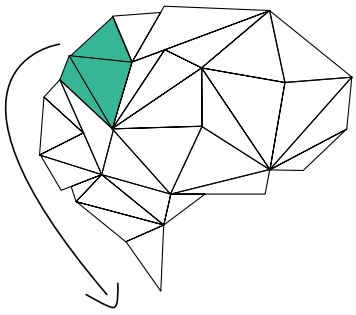

Task-switching

Definition: The ease with which you can shift your attention between tasks.

For example: After a transition, you find your opponent easily.

'Move' is an important building block for behavioural characteristics in football like:

- Focus attention
- Divide attention

Important brain region:
Superior parietal cortex

75

TIPS – when scoring lower

- Think beforehand where your focus needs to be
- Focus your attention on one person of task at the time

TOPS – when scoring higher

- You are capable to divide your attention efficiently between tasks and players
- You can easily switch between different tasks
- You focus your attention on what is important, even when things get chaotic

Reading guide of the Cognitive Talent Profile

This profile is based on the player's cognitive abilities as measured with the four cognitive games of the BrainsFirst NeurOlympics.

Discover the building blocks of football performance

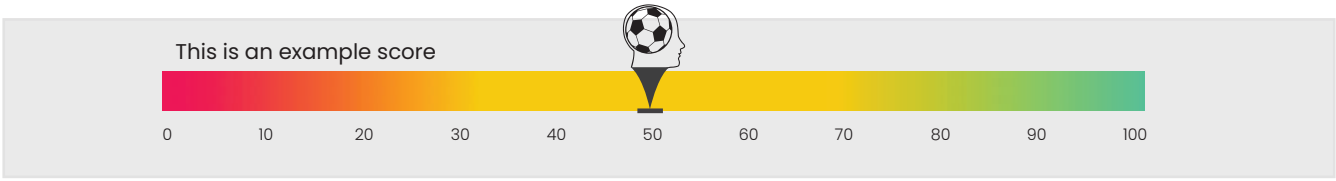

In addition to physical, technical, mental, and tactical abilities, talented football players must also have the right brain to break through as professional football players at the (inter)national level. In the NeurOlympics, such building blocks, and thus cognitive capacities such as working memory and attention, are measured with 4 games. Different parts of the brain are used per game.

BrainsFirst measures someone's brain functions with the NeurOlympics. These brain functions are the underlying processors of (football) skills. If the processor is relatively powerful (good score), then there is a greater chance that the skill has been developed above average or could be developed (with the right knowledge and practice).

About the scores

The person is compared against a large group of football players of the same age group, who play at a professional national and international level. The match score range on the football brain is 0–100, with 100 being the maximum score. See example:

Top football brain-score

How are cognitive skills expressed on the football field?

Your brain is responsible for perception, processing information and directing and controlling your football behavior. For each skill we indicate what this means in concrete terms and how you (possibly) see this reflected on the field.

How do I read the scores?

The football brain scores on the overview page help to make even better use of someone's talent and learn to deal with possible qualities and points for attention. It is then explained per cognitive skills what the definition is, how this building block of football performance is expressed in the field and how this can be compensated if the score is low.

Tips & tops

Each cognitive skill is a building block for a (professional) behavioral expression. For example, working memory capacity is a building block for overview, creativity and pro-active behaviour. If you are above average good at something, we will show you the possible quality of you on the field at "Tops". Are you struggling and do you score below average? Then we give you "Tips" to compensate or avoid this.
